

TANK CAMERAS

DIGITAL
MEASUREMENT

COST
EFFICIENT

100%
SAFE

APPLICATIONS

The name says it all, a tank camera is mainly used for inspecting large confined space like tanks, vessels and basements. Furthermore, this camera is ideally suitable to inspect larger spaces through relatively small openings.

The advantage is that the work can be performed 100% safely without having to physically enter the tank or vessel.

We can deploy the camera in various ways. Through a top, side or bottom nozzle manhole.

Different cameras

We have the tank camera available in a number of different versions. The camera that will be used depends on the access opening and the size of the area that has to be inspected.

Benefits

- No man entry
- Traceable inspection results
- Large zoom capacity
- Vessel inspection up to 30 meter
- 150 meter cable
- 70 meter waterproof
